

# **6 PCB DESIGN MISTAKES THAT STOP PRODUCTION**

Checklist

# 1

## No Test Points for Key Signals

- ✓ Include test points for power, ground, reset, communication buses, and critical GPIOs.
- ✓ Avoid test pads on RF or high-frequency signals.
- ✓ Put all test points on one side of the board, preferably the bottom.
- ✓ Group and label test points clearly, with nearby ground pads.

# 2

## Missing Part Number and Revision on the PCB

- ✓ Always include part number/project name and revision label on the silkscreen.
- ✓ Keep it small but visible, e.g., 'PN: 1203, Rev B'.
- ✓ Ensure part numbers and revisions match BOM, Gerbers, and pick-and-place files.

# 3

## No Fiducials for Pick-and-Place Alignment

- ✓ Add at least two global fiducials, ideally on opposite corners.
- ✓ Use local fiducials near QFNs, BGAs, or fine-pitch connectors.
- ✓ Keep 1 mm clearance from other copper/silkscreen and avoid soldermask.

## 4

### No Panelization or Depaneling Strategy

- ✓ Plan panelization if boards are under 100x100 mm.
- ✓ Add mouse-bite tabs or V-score areas while keeping components away from edges.
- ✓ Consult your CM for preferred panelization templates and requirements.

## 5

### Using Hard-to-Source or Obsolete Parts

- ✓ Check availability on sites like Octopart or Findchips.
- ✓ Ensure parts are available from multiple suppliers and not near end-of-life.
- ✓ Avoid parts marked 'Not Recommended for New Designs'.

## 6

### Tight Component Spacing and No Room for Rework

- ✓ Leave extra space around connectors, tall components, and rework-prone parts.
- ✓ Avoid mixing tall and short components too closely.
- ✓ Ensure space for hands, tweezers, and soldering irons for repairs.

For Entrepreneurs and Startups:

# Develop and launch your electronic product **FASTER** without costly mistakes!

Doing it alone is slow and risky. Small missteps now can become big problems later. Skip the mistakes and launch faster.

→ Frustrated things aren't moving as fast as you want?

Feeling unsure what to do next? ←

## Meet your guide: John Teel

Hey there, I'm a former microchip design engineer at Texas Instruments and founder of a hardware startup that sold products in hundreds of retail stores. My chip designs are in devices from Apple, Intel, and more.

Now, my full-time focus is helping people like you bring new electronic products to life, without wasting time, money, or risking everything.
